`\reportANOVA`

The `\reportANOVA` command produces text statistics. There are four arguments: between-group degrees of freedom {⟨*arg1*⟩}, within-groups degrees of freedom {⟨*arg2*⟩}, F-statistic {⟨*arg3*⟩}, and p-value {⟨*arg4*⟩}.

The command:

`\reportANOVA{1, 27, 8.8896, 0.1147}`

gives "$F(1, 27) = 8.89$, $p = .11$". Note that the macro removes leading zeros and trims values to two decimal places, where appropriate.
